HOW ARE WE GOING TO BUILD THIS APPLICATION?

Discover Nuxt Studio: the pro version of Content

Content made easy for Vue Developers

Nuxt Content reads the `content/` directory in your project, parses `.md`, `.yml`, `.csv` and `.json` files to create a powerful data layer for your application. Use Vue components in Markdown with the MDC syntax.

 Get Started

 What is Nuxt Content?

Spring Developer Advocate, YouTuber and Lifelong Learner

Hello 👋 My name is Dan Vega, Spring Developer Advocate, Husband and #GirlDad based outside of Cleveland OH. I created this website as a place to document my journey as I learn new things and share them with you. I have a real passion for teaching and I hope that one of blog posts, videos or courses helps you solve a problem or learn something new.

WORDPRESS

Nuxt v3.8 is out →

The Intuitive Vue Framework

Nuxt is an open source framework that makes web development intuitive and powerful.
Create performant and production-grade full-stack web apps and websites with confidence.

Happy Monday and welcome to another edition of the newsletter. I'm in the middle of a pretty stressful month, some of which I won't get into here. But if I'm being honest, I'm struggling a bit. However, I am doing my best to push forward. I have a bunch of presentations at upcoming events that I'm preparing for, and I couldn't be more excited about all of them.

In this episode, I want to talk to you about testing Spring Boot applications, Spring Cloud Gateway, and more.

Testing Spring Boot Applications

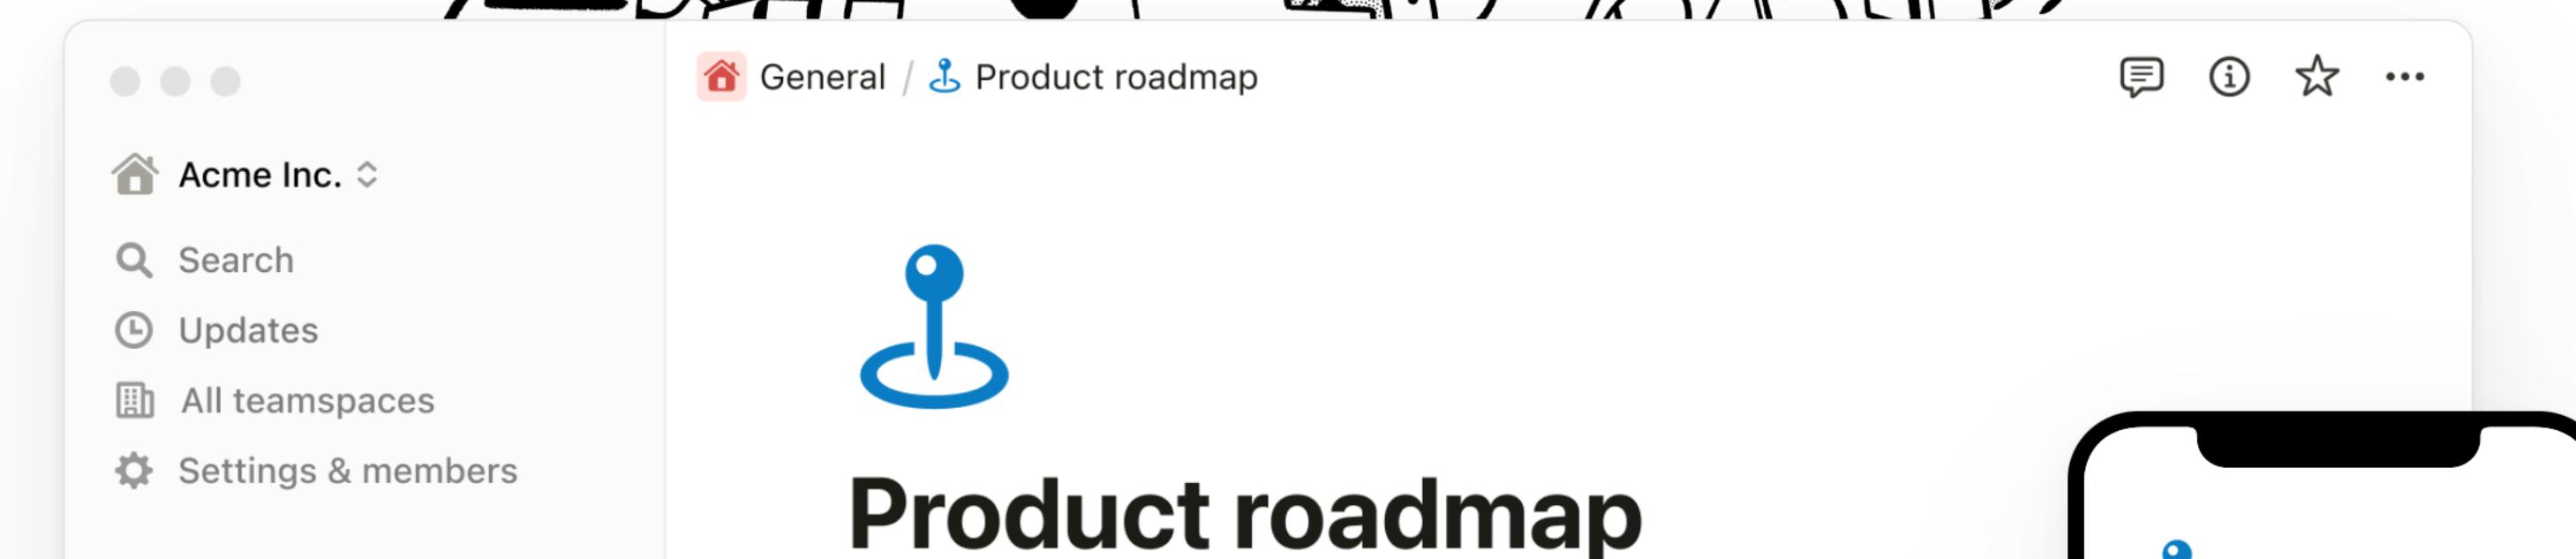

I recently had a discussion about testing Spring Boot applications during Spring Office Hours with DaShaun. One aspect of Spring Boot that I particularly appreciate is that testing is built-in and doesn't require any additional setup.

When you create a new project on start.spring.io, the `spring-boot-starter-test` is automatically included in your application. In the mentioned episode and the video provided below, I explain what is included in this starter. Understanding the components that come with

Your wiki, docs, & projects. Together.

NOTION FEATURES

- Notion's Text Editor
 - Headings / paragraphs / images / tables / etc...
 - Grammar / Spell Check / Comments
- Customized for you or your team
- Notion Web Clipper
- Templates
- Notion AI

The screenshot shows a Notion page titled "NEW TEST". The properties listed are:

| Property | Value |
|--------------|----------------------|
| Status | Done |
| Assign | Dan Vega |
| Date Created | October 10, 2023 |
| Date Updated | Empty |
| Image | |
| Section | Celebrate! |
| Slug | spring-cloud-gateway |

Below the properties is a comment section with a placeholder "Add a comment...". A text editor at the bottom shows the word "This is a test". A floating "Media" modal is open, showing a preview of a woman's face and the text "Upload or embed with a link." Below the modal, the text "/ima" is typed.

HOW NOTION WORKS?

- Workspace
- Databases
- Pages

NOTION TEMPLATES

- A template is a prebuilt Notion page that you can add to your workspace.
- Notion Template Gallery
- Any publicly shared page in Notion that can be duplicated is considered a template.

The screenshot shows a Notion page titled "Newsletter Template". At the top, there are several properties listed: Date (Empty), Assign (Dan Vega), Status (In Progress), Slug (Empty), and URL (Empty). Below these is a "Add a property" button and a "Add a comment..." input field. A link "Read this on danvega.dev" is present. On the left side, there's a sidebar with sections for "Around the web" containing links to Articles, Videos, Podcasts, Books, Courses, Newsletters, Quote of the week, and Tweet; and a section for "Until Next Week" with a message from Dan Vega.

Introduction

The reference is your key to a comprehensive understanding of the Notion API.

Integrations use the API to access Notion's pages, databases, and users. Integrations can connect services to Notion and build interactive experiences for users within Notion. Using the navigation on the left, you'll find details for objects and endpoints used in the API.

 You need an integration token to interact with the Notion API. You can find an integration token after you create an integration on the integration settings page. If this is your first look at the Notion API, we recommend beginning with the [Getting started guide](#) to learn how to create an integration.

If you want to work on a specific integration, you can do so by opening, configuring, and saving an integration in the Notion workspace. You can check it out from the UI via [Settings > My integrations](#). If you're not in administration of the workspace, you can contact your administrator for help.

NOTION API

Conventions

The base URL to send all API requests is <https://api.notion.com>. HTTPS is required for all API requests.

The Notion API follows RESTful conventions when possible, with most operations performed via `GET`, `POST`, `PATCH`, and `DELETE` requests on page and database resources. Request and response bodies are encoded as JSON.

JSON conventions

- Top-level resources have an `"object"` property. This property can be used to determine the type of the resource (e.g. `"database"`, `"user"`, etc.)
- Top-level resources are addressable by a UUIDv4 `"id"` property. You may omit dashes from the ID when making requests to the API, e.g. when copying the ID from a Notion URL.
- Property names are in `snake_case` (not `camelCase` or `kebab-case`).
- Temporal values (dates and datetimes) are encoded in [ISO 8601](#) strings. Datetimes will include the time value (`2020-08-12T02:12:33.231Z`) while dates will include only the date (`2020-08-12`)

| Create a database | POST |
| Filter database entries | |
| Sort database entries | |
| Query a database | POST |
| Retrieve a database | GET |
| Update a database | PATCH |
| Update database properties | |

Gets a list of [Pages](#) and/or [Databases](#) containing the specified filter conditions. The result may contain fewer than `page_size` of results. For more information about the [pagination reference](#) refer to the [Pagination](#) section.

 Wiki databases can contain both pages and objects.

[Filters](#) are similar to the [filters provided in the UI](#). A set of filters groups chained by "And" in the UI is equivalent to a compound "and" filter. Similar a set of filters represented as filters in the array of the "or" filter. Filters operate on database properties and objects. Pages in the database will be returned with their properties.

The above filters in the UI can be represented as:

Filter Object

Add a comment...

Health and wellness is such a huge topic these days. So much research is being done on living longer and fuller lives, which is really exciting! As a parent, it is so important to me to eat healthy, exercise, go for my annual exams, and do everything in my power to stay healthy and fit for my kids. In addition to being able to keep up with my young kids, I also want to be the grandma at the playground running around with my grandkids! I can say without question that when I prioritize nutrition, exercise, and mental health, I am a better parent. You can ask my husband who has to pick up the slack after I go on a no-exercise/Christmas cookie binge :). Life feels so much more full when you take care of yourself and feel good. This section of the blog is all about ways to support this healthy lifestyle.

For me, wellness is a feeling. I know that I am taking care of myself when I feel calm, energized, and ready to take on the day. Everything is in line mentally, physically, and emotionally. I'm sure it is different for everyone, but for me, this takes some (ok, a lot of) effort. I want to just touch briefly on what I do to get to this happy place, and I plan to write many more blog posts to dive into some of them in greater depth.

Retrieve a page

GET https://api.notion.com/v1/pages/{page_id}

Retrieves a [Page object](#) using the ID specified.

Responses contains page **properties**, not page content. To fetch page content, use the [Retrieve block children](#) endpoint.

Page properties are limited to up to **25 references** per page property. If a page property includes more than 25 references, then the 26th reference might be returned as [Untitled](#), [Anonymous](#), or not be returned at all. (See [Limits](#) below for additional information.)

Parent objects: Pages vs. databases

If a page's [Parent object](#) is a database, then the property values will come from the [database property schema](#).

If a page object is not part of a database, then the only property value for its parent is its [title](#).

Limits

The endpoint returns a maximum of 25 page or person references per page. If a page property includes more than 25 references, then the 26th reference might be returned as [Untitled](#), [Anonymous](#), or not be returned at all.

This limit affects the following properties:

- [people](#): response object can't be guaranteed to return more than 25 people.
- [relation](#): the [has_more](#) value of the [relation](#) in the response can only be `true` if the [relation](#) contains more than 25 related pages. Otherwise, [has_more](#) is `false`.
- [rich_text](#): response object includes a maximum of 25 populated rich text objects. This limit does not apply to person mentions.
- [title](#): response object includes a maximum of 25 inline page or person titles.

 **This endpoint will not accurately return properties with more than 25 references.**

WORKING WITH FILES AND MEDIA

- Files, images and other types of media are used throughout Notion to bring your pages to life.
- Files and media are stored and hosted externally
 - You can add external media
- Users can upload images through the UI
 - Files uploaded in this manner are stored in S3
- In the API, files and media types are referenced by the public URL that points to where the file is stored.

Nuxt 3 - A bliss to work with. ❤️

The collage illustrates the Nuxt 3 ecosystem, featuring:

- Nuxt Studio**: Git-based CMS.
- nuxt/cli**: Zero-config TypeScript support.
- DevTools**: Serverless Support (Out of the box).
- Module Ecosystem**: Easy to plug-in into your Nuxt project, including Pinia, Tailwind, VueUse, Supabase, Apollo, and Vitest.
- Automatic Code Splitting**: Diagram showing bundle.js splitting into chunk.js files.
- Hybrid Rendering**: Per route options: SSR, CSR, SWR, ISR.
- HMR**: Hot Module Replacement.
- File-based Routing**: Examples: /home, /posts/[id].
- Vite**: Powered by Vue 3.
- Nitro**: Server Engine.
- h3**: A performant and portable http framework, faster than Express.
- Universal Deployment**: Can be deployed ANYWHERE, supported by Vercel, Cloudflare Workers, Netlify, and more.

The central image shows a snowy mountain range with the text "Nuxt The Intuitive Vue Framework" and the command "npx nuxi init nuxt-app".

NUXT FEATURES

NUXT 3 FEATURES

- File System Routing
- Data Fetching
- Auto Imports
- Composables
- Modules & Plugins
- SEO & Meta Tags
- dot env Support
- Transitions

Nuxt v3.8 is out →

The Intuitive Vue Framework

is an open source framework that makes web development intuitive and powerful, performant and production-grade full-stack web apps and websites with confidence.

Get Started

What is Nuxt?

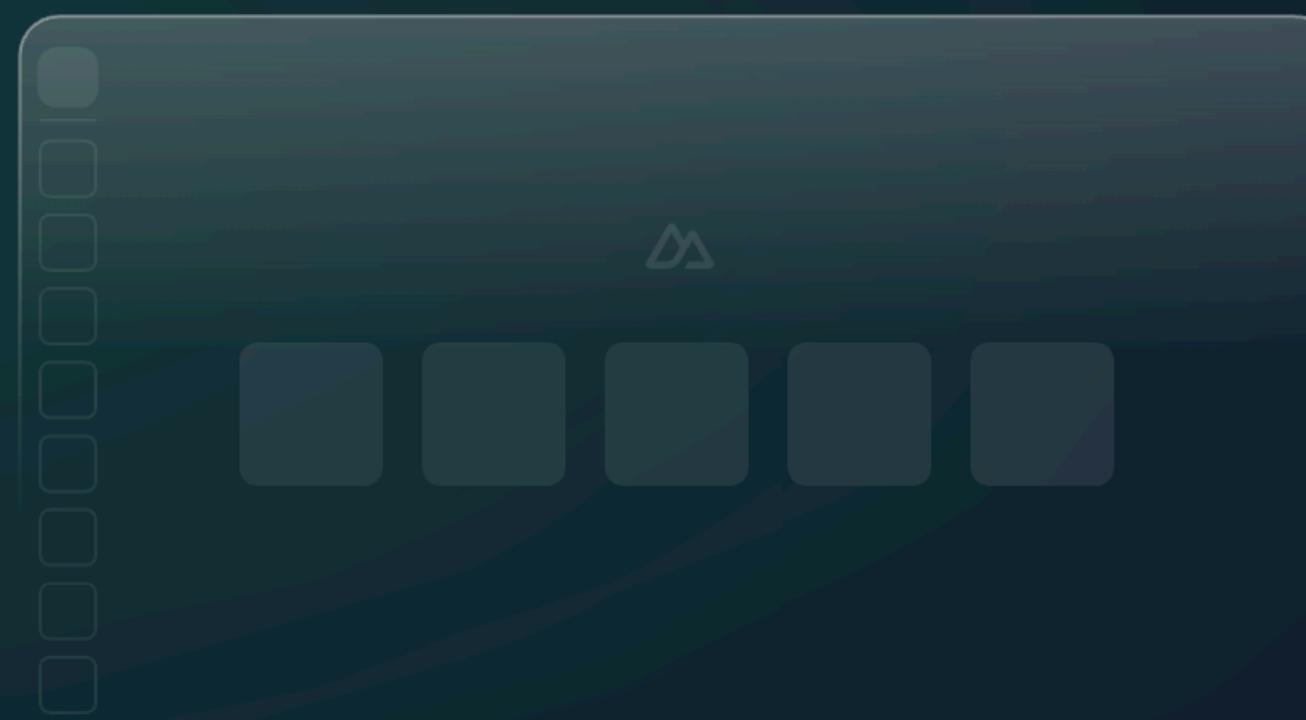

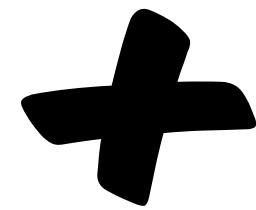

NUXT NITRO

- Cross-platform support for Node.js, Browsers, service works and more.
- Serverless Support out-of-the-box.
- API Routes Support.
- Automatic code-splitting and async loaded chunks.
- Hybrid mode for static + serverless sites.
- Development Server with hot module reloading.

Unleash Nuxt Developer Experience

The Nuxt DevTools gives you insights and transparency about your Nuxt App. Identify performance gaps and seamlessly manage your app configurations.

[!\[\]\(90fd06adc4bd3ab0f194c201536c8676_img.jpg\) Get started](#)[!\[\]\(0ae0d7098e1824061ea5df9c7417a653_img.jpg\) What is Nuxt DevTools?](#)

Health and wellness is such a huge topic these days. So much research is being done on living longer and fuller lives, whether you are a parent, a grandparent, or a healthcare professional. As a parent, it is so important to me to eat healthy, exercise, go for my annual exams, and do everything in my power to stay healthy. In addition to being able to keep up with my young kids, I also want to be the grandma at the playground running around with them. I can say without question that when I prioritize nutrition, exercise, and mental health, I am a better parent. You can ask my husband, he says I'm in the slack after I go on a no-exercise/Christmas cookie binge :). Life feels so much more full when you take care of yourself. This section of the blog is all about ways to support this healthy lifestyle.

For me, wellness is a feeling. I know that I am taking care of myself when I feel calm, energized, and ready to take on the day physically, mentally, emotionally, and spiritually. I'm sure it is different for everyone, but for me, this takes some (ok, a lot of) effort. I will be sharing more on what I do to get to this happy place, and I plan to write many more blog posts to dive into some of them in greater depth.

I have no regrets about the ice cream dates I've partaken in with my kids this summer, but the scale is starting to remind me that I don't have the metabolism of a five-year-old. After all of the delicious 4th of July foods I ate (and continued to eat throughout the entire week) I decided it was time to get back on track before things got too out of hand! I like to do these little "resets" so that I can enjoy myself when I want and then get back to my healthy lifestyle.

I have never been a diet person because I don't like the feeling of not being allowed to have any certain foods. I do like to think of food as medicine though and I FEEL so much better when I maintain a healthy lifestyle, which to me means eating as much whole/unprocessed foods as possible. This usually looks like lots of fruits and veggies and lean proteins. As much as I enjoy having donuts in my PJs with my kids in the moment, I do pay for it for the rest of the day. I end up feeling sluggish and craving more carbs and sugar throughout the day. That's why I love the healthy swaps I've found, like having almond flour waffles instead of pancakes, or homemade donuts or muffins instead of store-bought junk food. It IS more time-consuming, and I very much look forward to the day when you can buy healthy treats as easily as you can find the artificial sugar bombs in every grocery store! (Maybe one day my healthy muffin shop will come to fruition). I try to bake something most Fridays so that we have some healthy treats to enjoy over the weekend. I have a whole blog post containing all of my healthy baking recipes, which you can find [here](#).

When I need to reel it in a little, I like to stick to lower-carb/higher-protein meals. A "low-carb diet" has never worked for me, because I get cranky and hangry and almost always end up ordering a pizza after a few days and swearing to my husband that I will never put him through this hell again ;). However, I've recently been trying a new approach that combines higher protein meals than I have eaten in the past (especially in the morning) and Intermittent Fasting. I honestly thought the idea of IF was kind of dumb when I first heard about it, but it really does help me to eat fewer calories throughout the day. I've been doing a 16-hour fasting time and then eat between the hours of 10 AM and 6 PM, which has been really easy to stick to with my schedule. I do have a coffee with the tiniest splash of almond milk creamer when I wake up which I don't count because I am a HUMAN BEING ;)

BlockRenderer.vue

```
1 <script setup lang="ts">
2 import Heading1 from './Heading1.vue';
3 import Heading2 from './Heading2.vue';
4 import Heading3 from './Heading3.vue';

```

RENDERING MODES

- Universal Rendering (default)
- Client Side Rendering
- Hybrid Rendering
- nuxt.com/docs/guide/concepts/rendering

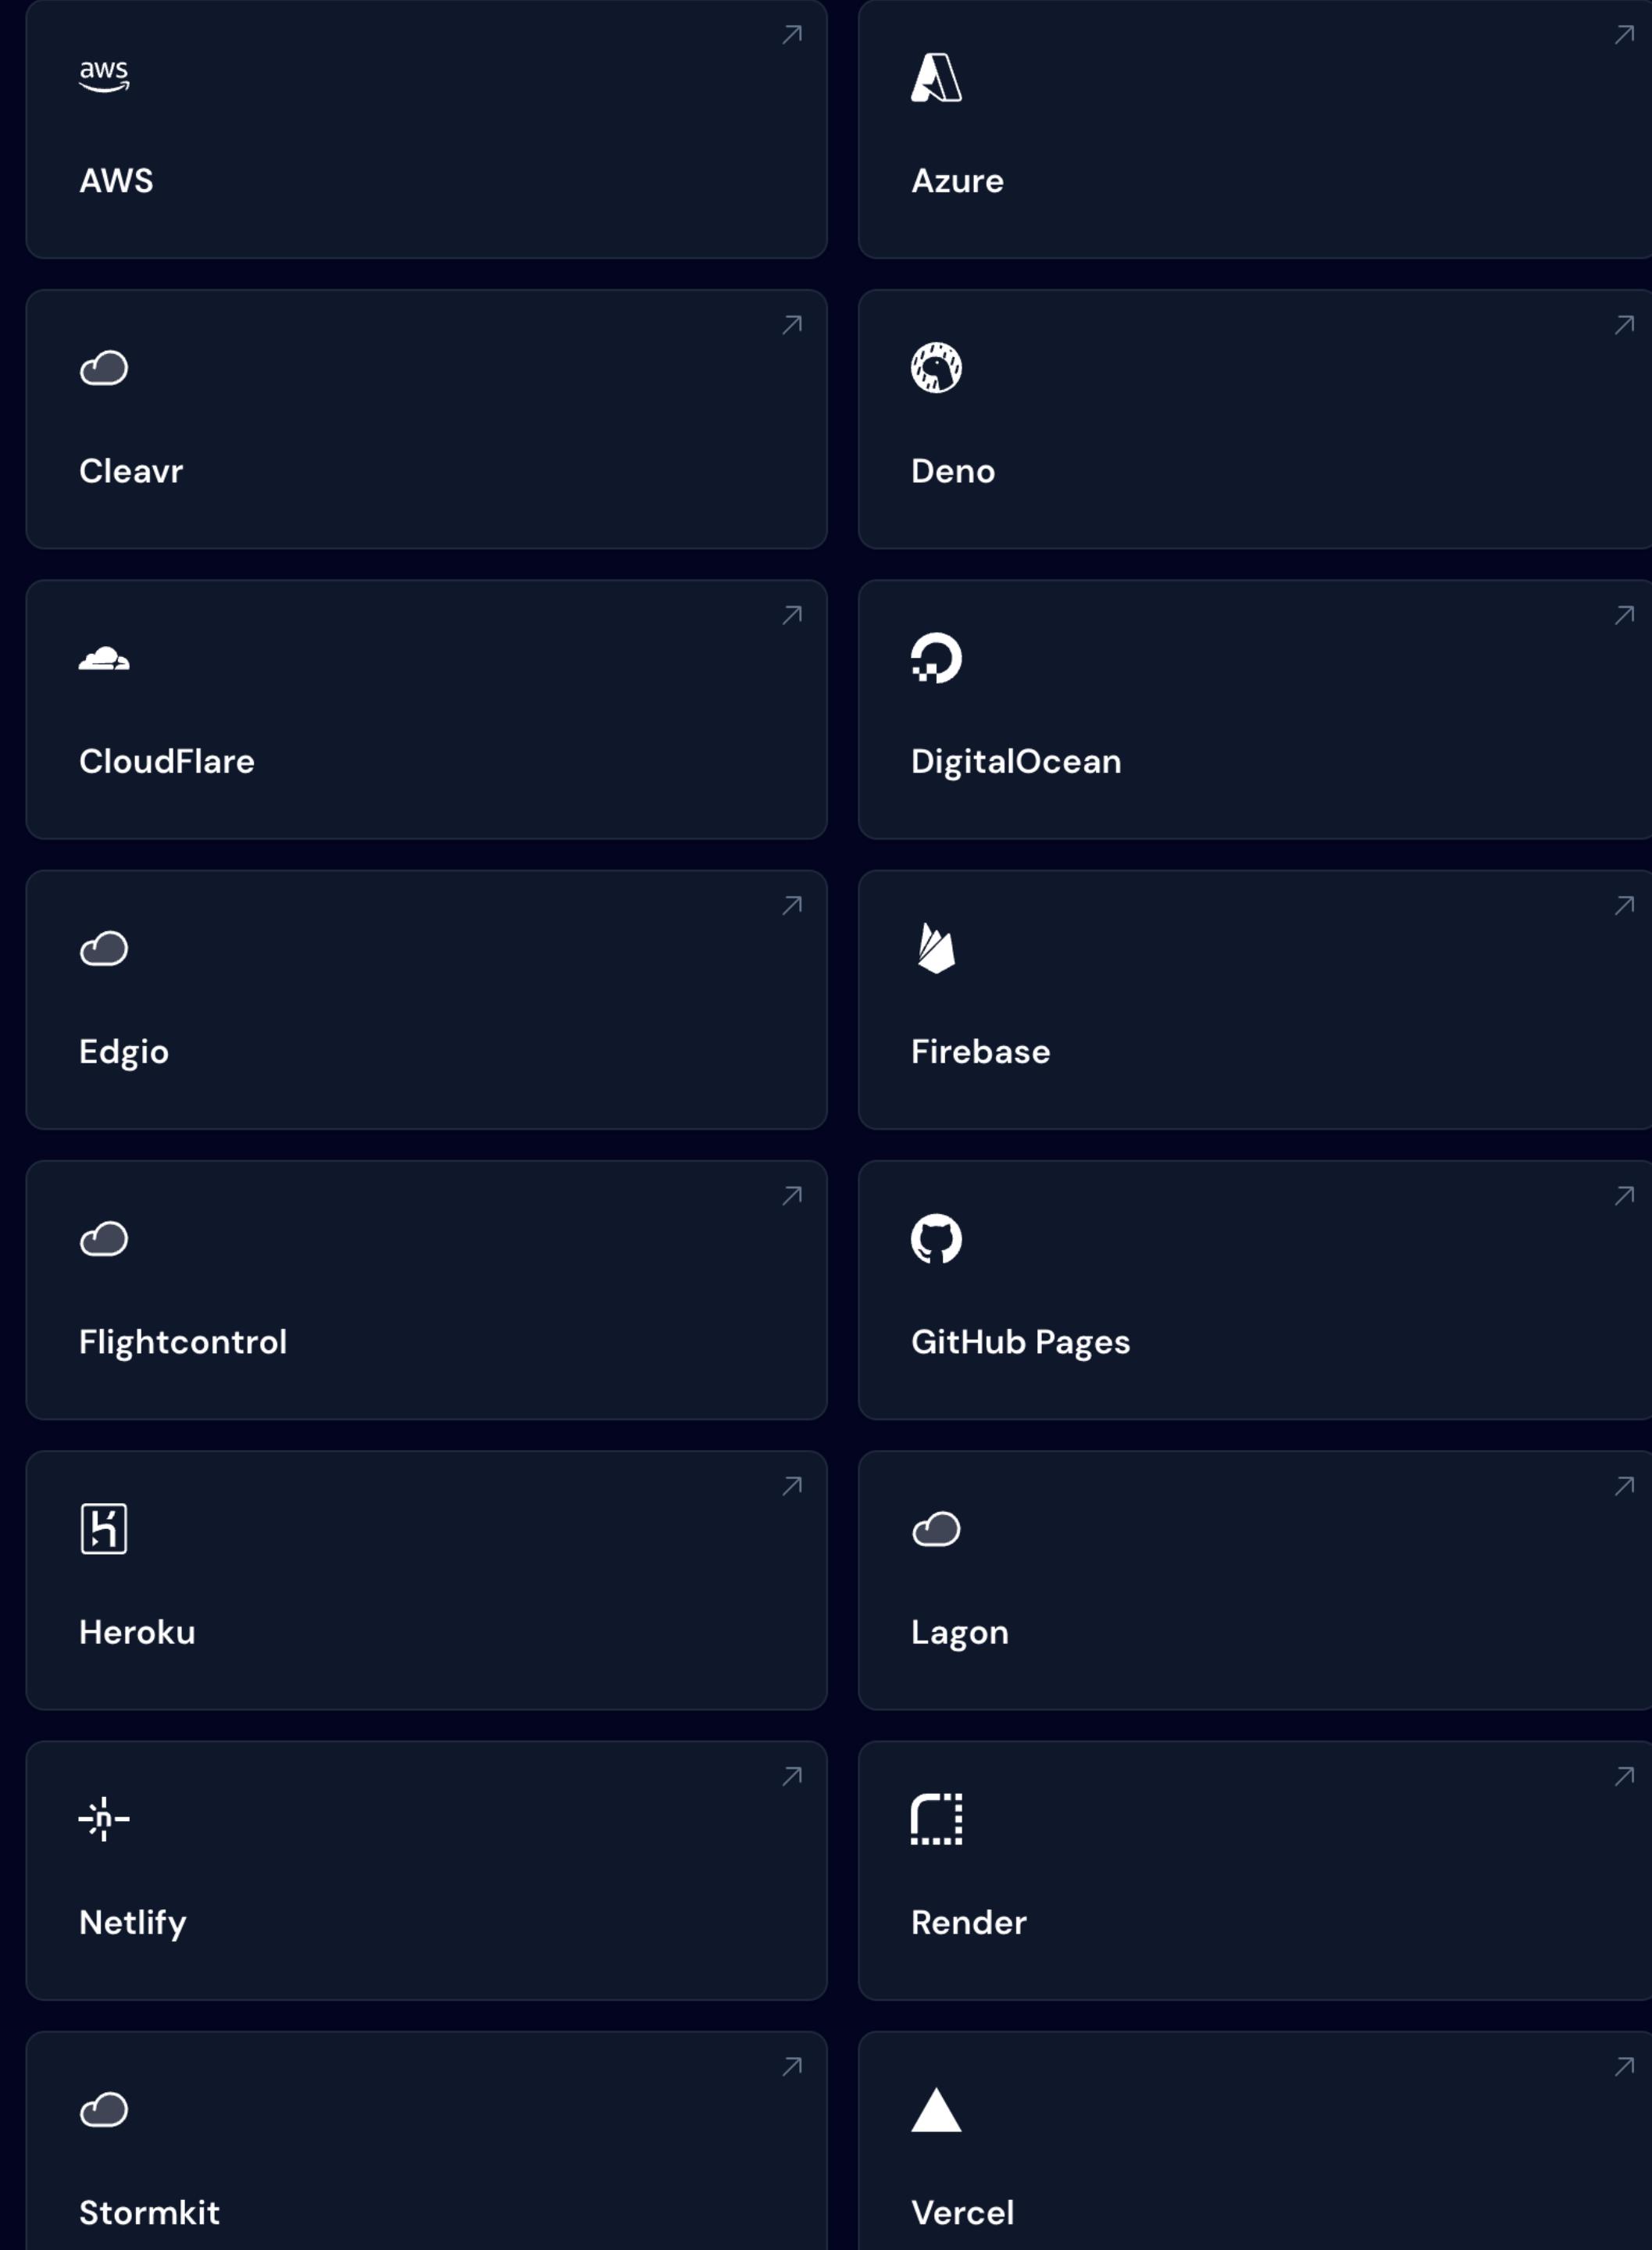

nuxt.config.ts

```
1 export default defineNuxtConfig({
2   routeRules: {
3     // Homepage pre-rendered at build time
4     '/': { prerender: true },
5     // Product page generated on-demand, revalidates in background
6     '/products/**': { swr: true },
7     // Blog post generated on-demand once until next deploy
8     '/blog/**': { isr: true },
9     // Admin dashboard renders only on client-side
10    '/admin/**': { ssr: false },
11    // Add cors headers on API routes
12    '/api/**': { cors: true },
13    // Redirects legacy urls
14    '/old-page': { redirect: '/new-page' }
15  }
16 })
```

DEPLOYMENT

Your Nuxt Application can be deployed on

- A Node.js Server
- Pre-rendered for Static Hosting
- Serverless or Edge (CDN) Environment

Hello, I'm Jen Vega!

I am the creator and writer of This Is My Momoir. Thank you so much for being here! Aside from being a writer, I am the wife of a pretty awesome guy named Dan Vega and the mom of two adorable little girls, Isabella and Juliana. We are lifelong Clevelanders living in the suburb of Rocky River, Ohio. I love reading and writing and have a Bachelor of Arts degree in English from Cleveland State University. I also love to cook, bake, exercise, and travel among other hobbies. [Click here to learn more.](#)
